### TECH SKILLS

---

- JavaScript
- HTML
- CSS/SCSS
- Bootstrap
- Gulp
- Git/GitHub
- Responsive/Adaptive design
- Chrome DevTools
- Figma / Zeplin

### SUMMARY

---

I specialize in building responsive user interfaces. This document outlines my core skills, but I can provide an extended portfolio that demonstrates my coding standards, logic architecture, and detailed problem-solving process.

### PROJECT EXPERIENCE

---

#### CSS Generator Tools [Demo](#) | [Code](#)

An interactive web tool designed for real-time CSS property generation based on user inputs with instant visual feedback.

**Real-time CSS Generation:** Implemented instant style updates without page reloads, ensuring a smooth user experience. **UI & Code Synchronization:** Engineered a logic to keep UI controls (sliders / inputs) perfectly synced with the resulting CSS code output. **Modular Architecture:** Structured the property generation logic into modules for better maintainability and scalability. **UX Features:** Added a “Copy to Clipboard” functionality and curated collection of ready-made Box Shadow presets for immediate use.

Technologies Used: HTML, SCSS, JavaScript

#### Client-first [Demo](#) | [Code](#)

Developed a multi-page responsive website with a modern UI/UX design. Key Features: responsive layout; custom sliders in pure JavaScript; burger menu; tab and anchor link navigation; cross-tab navigation between pages

Technologies Used: HTML, SCSS, JavaScript

#### Masters Hub [Demo](#) | [Code](#)

Adaptive landing page. Sliders, modals, tabs, burger menu implemented without third-party libraries. Performance optimized with a focus on Core Web Vitals. Automated workflow using Gulp for task management and build processes

Technologies Used: HTML, SCSS, JavaScript, Gulp

### EDUCATION

---

**Udemy:** Complete course in JavaScript + React – from Zero to Result, author Ivan Petrichenko (in progress)

**VN Karazin Kharkiv National University:** master's degree in Finance, graduated in 2012
